Motherboard Feature Introduction

SPECIFICATIONS

System Chipset	Intel® 440LX chip set ,Winbond 83977TF-AW
CPU	Pentium® II Klamath CPU 233MHz ~ 333MHz
Memory Subsystem	Expandable to 384MB(3 banks) with 168-Pin SDRAM(DIMM) Socket X3
Integrated I / O	Two high speed 16550 compatible serial ports, one Multi-Mode Parallel Port fixed SPP/EPP/ECP standard
	Two PCI Bus master Ultra DMA/33 IDE port (up to 4 IDE Devices)
	Support two 360KB / 720KB / 1.2MB / 1.44MB / 2.88MB / floppy disk driver
	Support LS120 drives, ZIP 100 drives
	Support two USB ports
	Support IrDA TX / RX header

On-Board W83781D	CPU/Power Supply /chassis Fan Revolution Detect
	CPU Fan Control (the fan will automatically stop when the system enters suspend mode)
	CPU Overheat Warning(reserved)
	Chassis Intrusion Detect (reserved)
	Display Actual Current Voltage
BIOS	1MB Flash ROM
	Award AGP BIOS with green, plug and play, ACPI,
	DMI feature support
	Support secondary device boot
Expansion slot	Four 32-bit PCI Slots & three 16-bit ISA Slots
	Support 3.3/5V PCI 2.1 bus Interface
EXTRA Function	Support Keyboard and PS/2 Mouse ON-NOW Function
	Suspend LED on/off
	Win95 soft power off
	External SMI
	Wake up by ring

Keyboard Connector	PS/2 Keyboard and PS/2 mouse Connector
Others	Windows 95 Compatible
Dimension	ATX size (350mm x 190mm), 4-layer PCB

POWER OFF CONTROL SOFTWARE

The motherboard design supports software power off Control feature through the SMM code in the BIOS under Win95 operating system environment. This is INTEL ATX form factor feature and you should use ATX power supply.

First, you should connect the power switch cable (provided by the ATX case Supplier) to the connector [PW_ON] on the motherboard. In the BIOS screen of "POWER MANAGEMENT SETUP", choose "User Defined"(or min power saving or Max power saving) in "POWER MANAGEMENT" and choose "Yes" in "PM Control by APM".

In Windows 95 the " SHUT DOWN " option , the computer's Power will switch off automatically and put the PC in a suspend mode. A bunking power light will indicate this. To restart the system , simply press the Power Button.

PACKAGING CHECK LIST

The motherboard comes securely packed in a durable box and shipping carton. If any of the above items are missing or damaged , please contact your supplier.

The motherboard contains:

Q' TY	Description		
1	Motherboard	:	B686
1	Diskette	:	Bus master driver
			Award system BIOS utility W83781D AP
1	Cable	:	Enhanced IDE connector
1	Cable	:	F.D.D connector
1	Manual	:	User' s manual
1	Temperature Resister	:	use for temperature sensor

MEMORY INSTALLATION

No jumper setting is necessary for DRAM setting, BIOS will check DRAM type and size automatically. B686 main board contains 3 by 168-pin DIMM sockets (DIMM1,DIMM2,and DIMM3) . B686 main board has table-free (or auto-bank) feature and user can install DIMM into any bank. The three DIMMs Sockets for system memory expansion from 8MB to 384 MB. Each bank provides 64-bit wide data path.

NOTE: Samples of System Memory Combinations Options

DIMM1	DIMM2	DIMM3	TOTAL
8MB	---	---	8Mbytes
---	8MB	---	8Mbytes

Chapter 3

Award BIOS Setup

Award BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type information is stored in battery-backed RAM so that it retains the Setup information when the power is turned off.

Entering Setup

Power on the computer and press <Del> immediately will allow you to enter Setup. The other way to enter Setup is to power on the computer , when the below message appears briefly at the bottom of the screen during the POST (Power On Self Test), press <Del> key or simultaneously press <Ctrl>, <Alt>, and <Esc> keys.

TO ENTER SETUP BEFORE BOOT PRESS CTRL-ALT-ESC OR DEL KEY

If the message disappears before you respond and you still wish to enter Setup, restart the system to try again by turning it OFF then ON or pressing the "RESET" button on the system case.   You may also restart by simultaneously press <Ctrl>, <Alt> and <Del> keys.   If you do not press the keys at the correct time and the system does not boot , an error message will be displayed and you will again be asked to,

PRESS F1 TO CONTINUE, CTRL-ALT-ESC OR DEL TO ENTER SETUP

Control Keys

Up Arrow	Move to previous item
Down Arrow	Move to next item
Left Arrow	Move to the item in the left hand

Right Arrow	Move to the item in the right hand
Esc Key	Main Menu Quit and not to save changes to CMOS
	Status Page setup menu and Option Page
	Setup Menu Exit current page and return to Main Menu
PgUp Key	Increase the numeric value or make changes
PgDn Key	Decrease the numeric value or make changes
F1 Key	General help, only for Status Page Setup Menu and Option Setup Menu
F2 Key	Change color from total 16 colors
F3 Key	Calendar, only for Status Page Setup Menu
F4 Key	Reserved
F5 Key	Restore the previous CMOS value from BIOS, only for Option Page Setup Menu
F6 Key	Load the default CMOS value from BIOS default table, only for Option Page Setup Menu
F7 Key	Load the default
F8 Key	Reserved
F9 Key	Reserved
F10 Key	Save all the CMOS changes, only for Main Menu

Getting Help

Main Menu

The on-line description of the highlighted setup function is displayed at the bottom of the screen.

Status Page Setup Menu/Option Page Setup Menu

Press F1 to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item.   To exit the Help Window press <Esc>**.**

The Main Menu

Once you enter Award BIOS CMOS Setup Utility, the Main Menu will appear on the Screen..   Use   arrow keys to select among the items and press to accept or enter the **sub-menu.**

ROM PC/ISA BIOS   (2A69JPNA)
CMOS SETUP UTILITY
AWARD SOFTWARE, INC.

STANDARD CMOS SETUP	INTEGRATED PERIPHERALS
BIOS FEATURE SETUP	SUPERVISOR PASSWORD
CHIPSET FEATURES SETUP	USER PASSWORD
POWER MANAGEMENT SETUP	IDE HDD AUTO DETECTION
PNP/PCI CONFIGURATION	SAVE & EXIT SETUP

LOAD SETUP DEFAULTS	

Esc : Quit   ←↑↓→ : Select Item
F10 : Save & Exit Setup   (Shift) F2 : Change Color

Standard CMOS Setup

This setup page includes all the items in standard compatible BIOS.

BIOS Features Setup

This setup page includes all the items of Award special enhanced features.

Chipset Features Setup

This setup page includes all the items of chipset special features.

Power Management Setup

This menu provides functions for Green products by allowing users to set the timeout value for monitor and HDD.

PNP / PCI CONFIGURATION SETUP

This menu allows the user to modify PNP / PCI configuration function.

Load BIOS Defaults

BIOS defaults indicates the most appropriate value of the system parameter which the system would be in minimum performance.

Load Setup Defaults

Chipset defaults indicates the values required by the system for the maximum performance.

INTEGRATED PERIPHERALS

This section page includes all the items of IDE hard drive and Programmed

Input / Output features.

Supervisor / User Password Setting

Change, set, or disable password.   It allows you to limit access to the system and Setup, or just to setup.

IDE HDD Auto Detection
Automatically configure hard disk parameters.

HDD Low Level Format
If supported by your system, this provides a hard disk low level format utility.

Save & Exit Setup
Save CMOS value changes to CMOS and exit setup.

Exit Without Saving
Abandon all CMOS value changes and exit setup.

Standard CMOS Setup

The items in Standard CMOS Setup Menu are divided into several categories.   Each category includes no, one or more than one setup items. Use the arrow keys to highlight the item and then use the <PgUp> or <PgDn> keys to select the value you want in each item.

Virus Warning
This category flashes on the screen.   During and after system boots up, any attempt to write to the boot sector or partition table of the hard disk drive will halt the system and the following error message will appear, in the mean time , you can run anti-virus programs to locate the problem.

!WARNING!
Disk boot sector is to be modified
Type "Y" to accept write or "N" to abort write
Award Software, Inc.

Enabled   Activate automatically when the system boots up causing a warning message to appear when anything attempts to access the boot sector or   hard disk partition table.

Disabled   No warning message to appear when anything attempt to access the boot sector or hard disk partition table.

CPU Internal Cache/External Cache

These two categories speed up memory access. However, it depends on CPU/chipset design.   The default value is Enabled.

Enabled: Enabled cache

Disabled: Disabled cache

Quick Power On Self Test

This category speeds up Power On Self Test (POST) after you power on the computer. If it is set to Enable, BIOS will shorten or skip some check items during POST.

Enabled: Enable quick POST

Disabled: Normal POST

Boot Sequence

This category determines which drive computer searches first for the hard disk operation system (i.e., DOS).

A, C,SCSI: System will first search for floppy disk drive then   second search   hard disk driver, then SCSI driver.

C,A,SCSI/ D,A,SCSI/ E,A,SCSI/ F,A,SCSI:
> System will first search for IDE hard disk driver (C: D: or E: or F☺ then second search floppy disk driver then SCSI hard disk driver.

SCSI,A,C: System will first search SCSI   hard disk driver then second search for floppy disk driver then   IDE hard disk driver.

CDROM,C,A:
> System will first search for the CDROM driver (If the CDROM has a bootable CD title.)and second search hard disk driver then floppy disk driver .

C,CDROM,A:
> System will first search for the hard disk driver and second search for CDROM driver (If the CDROM has a bootable CD title,) then searches floppy disk driver.

LS120,C: System will first search   LS120 disk driver and second search for IDE hard disk driver.

Swap Floppy Drive

Users can enable this item so that the BIOS will see the hardware "Drive A:" as "Drive B:"" , and hardware "Drive B:"" as   "Drive A:"".

Boot Up Floppy Seek

During POST, BIOS will determine if the Floppy disk drive installed is 40 or 80 tracks.   360 K type is 40 tracks while 720K, 1.2M and 1.44M drive type as they are all 80 tracks.

Enabled: BIOS searches for floppy disk drive to determine if it is 40 or 80 tracks.   Note that BIOS can not tell from 720K, 1.2M or 1.44M drive type as they   are all 80 tracks.

Disabled: BIOS will not search for the type of floppy disk drive by track number. Note that there will not be any warning message if the drive installed is 360K.

Boot Up NumLock Status

The default value is On.

On: Keypad is number keys

Off: Keypad is arrow keys

Boot Up System Speed

It selects the default system speed – the speed that the system will run at immediately after power up.

High:Set the speed to high

Low: Set the speed to low

Gate A20 Option

The   Gate A20 Option default setting is   fast.".   This is the optimum setting for this mainboard.

Typematic Rate Setting

This determines the typematic rate.

Enabled: Enable typematic rate
Disabled: Disable typematic rate

Typematic Rate (Chars/Sec)

6   : 6 characters per second
8   : 8 characters per second
10   : 10 characters per second
12   : 12 characters per second

15 : 15 characters per second

20 : 20 characters per second

24 : 24 characters per second

30 : 30 characters per second

Typematic Delay (Msec)

When holding the key, the time between the first and second character will be displayed.

250 : 250 msec

500 : 500 msec

750 : 750 msec

1000 : 1000 msec

Security Option

This category allows you to limit access to the system and Setup, or just to Setup.

System: The system will not boot and access to Setup will be denied if the correct   password   is not entered at the prompt.

Setup: The system will boot, but access to Setup will be denied if the correct   password is not entered at the prompt.

Note: *To disable security, select PASSWORD SETTING at Main Menu and then you will be asked to enter password.   Do not type anything and just press* **<Enter>**, *it will disable security.   Once the security is disabled, the system will boot and you can enter Setup freely.*

Video BIOS Shadow

It determines whether video BIOS will be copied to RAM, however, it is optional from chipset   design.   Video shadow will increase the video speed.

Enabled: Video shadow is enabled

Disabled: Video shadow is disabled

C8000-CBFFF Shadow/DC000-DFFFF Shadow

These categories determine whether optional ROM will be copied to RAM by 16K byte.

Enabled: Optional shadow is enabled

Disabled: Optional shadow is disabled

This category determines the power consumption for the system after selecting below items. Default value is Disabled. The following pages tell you the options of each item & describe the meanings of each option.

Item	Options	Descriptions
A. Power Management	1. Disable	Global Power Management will be disabled
	2. User Define	Users can configure their own power management
	3. Min Saving	Pre-defined timer values are used such that all timers are in their MAX value
	4. Max Saving	Pre-defined timer values are used such that all timers MIN value

Item	Options	Descriptions
3 PM Control by APM	1. No	System BIOS will ignore APM when power managing the system
	2. Yes	System BIOS will wait for APM's prompt before it enter any PM mode e.g. DOZE, STANDBY or SUSPEND
	Note: If APM is installed, & if there is a task running, even the timer is time out, the APM will not prompt the BIOS to put the system into any power saving mode!	
	Note: – if APM is not installed, this option has no effect	
	To make the APM function work, users have to install power.exe (supported by MS-DOS 5.0 or higher) in Config.exe. To make the Windows 3.1 work regularly, in " Windows Setup", users have to set the "Computer" item to " MS-DOS System with APM"	
C. Video Off Option	1. Always On	System BIOS will never turn off the screen
	2. Suspend –> Off	Screen off when system is in SUSPEND mode
	3. Susp, Stby –> Off	Screen off when system is in STANDBY or SUSPEND mode

	4. All Modes –> Off	Screen off when system is in DOZE, STANDBY or SUSPEND mode
D. Video	1. Blank Screen	The system BIOS will only blanks off the screen when disabling video
	2. V/H SYN C+Blank	In addition to (1), BIOS will also turn off the V-SYNC & H-SYNC signals form VGA cards to monitor

Item	Options	Descriptions
D. Video	3. DPMS	This function is enabled for only the VGA card supporting DPM
E. HDD Power Down (#) Remark 2	1. Disable	HDD's motor will not off

		Defines the continuous HDD idle time before the HDD entering power saving mode (motor off)

	3. When Suspend	BIOS will turn the HDD's motor off when system is in SUSPEND mode
	Note: - (2) & (3) can't be selected at the same time - When HDD is in power saving mode, any access to the HDD will wake the HDD up	

B686

Item	Options		Descriptions
3 Doze Mode 　　(*)　Remark　1	1.　Disable		System will never enter DOZE mode
	2.	10　Sec 20　Sec 30　Sec 40　Sec 1　Min 3　Min 5　Min 10　Min 15　Min 20　Min 30　Min 40　Min 1　Hr 2　Hr 3　Hr	Defines the continuous idle time before the system entering DOZE mode. If any item defined in (J) is enabled & active, DOZE timer will be reloaded.
	Note: Normally, STANDBY mode puts the system into low speed or 8 MHz, screen may be off depend on (E)		
3　Standby Mode 　　(*)　Remark　1	1.　Disable		System will never enter STANDBY mode
	2.	10　Sec 20　Sec 30　Sec 40　Sec 1　Min 3　Min 5　Min 10　Min 15　Min 20　Min 30　Min 40　Min 1　Hr 2　Hr 3　Hr	Defines the continuous idle time before the system entering STANDBY mode. If any item defined in (J) is enabled & active, STANDBY timer will be reloaded
	Normally, STANDBY mode puts the system into low speed or 8, screen may be off depend on (E)		

Item	Options	Descriptions
H.　Suspend　Mode 　　(*)　Remark　1	1.　Disable	System will never enter SUSPEND mode
	2.　10　Sec 　　20　Sec 　　30　Sec 　　40　Sec 　　1　Min 　　3　Min 　　5　Min 　10　Min 　15　Min 　20　Min 　30　Min 　40　Min 　　1　Hr 　　2　Hr 　　3　Hr	Defines the continuous idle time before the system entering SUSPEND mode. if any item defined in (J) is enabled & active, SUSPEND timer will be reloaded
	Note:　Normally, SUSPEND mode puts the system into low speed or 8 MHz, clock is stopped, screen may be off depend on (E)	
I.　PCI Master Activity 　　COM Ports Activity 　　LPT Ports Activity 　　HDD Ports Activity 　　DMA Ports Activity 　　VGA Activity 　　IRQ3 (COM 2) 　　IRQ4 (COM 1) 　　IRQ5 (LPT 2) 　　IRQ6 (Floppy Disk) 　　IRQ7 (LPT 1) 　　IRQ8 (RTC Alarm) 　　IRQ9 (IRQ2 Redir) 　　IRQ10 (Reserved) 　　IRQ11 (Reserved) 　　IRQ12 (PS/2 Mouse) 　　IRQ13 (Coprocessor) 　　IRQ14 (Hard Disk) 　　IRQ15 (Reserved)	1.　Disable	The specified event's activity will not affect the PM timers
	2.　Enable	The specified event's activity causes the PM Timers to be reloaded. i.e. the Power Management Unit(PMU) monitors the specified activities as PM events

*   Remark 1: All items mark with (*) in this menu, will be loaded with predefined values as long as the item "Power Management" is not configured to "User Defined"

These items are:

Item "System Doze", "System Standby" & "System Suspend"

Remark 2: Although the item "HDD Power Down" is not controlled by item "Power Management" in terms of timer value, the HDD (s) will not power down if the global power management is disabled!

PNP / PCI Configuration Setup

PNP OS Installed : No Resources Controlled By : Auto Reset Configuration Data : Disabled		PCI IDE IRQ Map TO :ISA
		ESC: Quit ↑↓→←: Select Item F1 : Help PU / PD / + / - : Modify F5 : Old Values (Shift)F2 : Color F6 : Load BIOS Defaults F7 : Load Setup Defaults

The following pages tell you the options of each item & describe the meanings of each option.

Item	Options	Descriptions

A. 1st Available IRQ
    2nd Available IRQ
    3rd Available IRQ
    4th Available IRQ
	3
	4
	5
	7
	9
	10
	11
	12
	14
	15
	NA
		The system BIOS will assign these 4 available IRQs to the found PCI devices

Item	Options	Descriptions
B. PCI IDE 2nd Channel	Enable Disable	Enable/disable 2nd channel of PCI/IDE card. It includes I/O port (170H~177H) and IRQ 15 assignment
C. PCI IDE IRQ Map To	PCI-AUTO PCI-SLOT1 PCI-SLOT2 ISA	PCI-AUTO The BIOS will: − scan for PCI IDE devices & determine the location of the PCI IDE device
	PCI-AUTO PCI-SLOT1 PCI-SLOT2 ISA	PCI-SLOT1 PCI-SLOT2 − assign IRQ 14 for primary IDE INT# IRQ 15 for secondary IDE INT# for the specified slot ISA − The BIOS will not assign any IRQs even if PCI IDE card is found! Because some IDE cards connect the IRQ 14 & 15 directly from ISA slot through a cord. (This cord is called Legacy Header)
F. Primary IDE INT# Secondary IDE INT#	A B	To tell which INT# does the PCI IDE card is using for its interrupts

Your computer vendor optimizes the other items, please do not modify them unless you know its function exactly.

		F5 : Old Values (Shift) F2 : Color	
		F6 : Load BIOS Default	
		F7 : Load Setup Default	

This setup menu is optimized for this motherboard by your computer vendor.
Unless you are a qualified engineer & know the items, function you are going
to modify. We do not recommend you to change the default setting.

‖ *This Motherboard (B686) can support " ON-NOW" Function, so the item of "POWER ON Function" is Enabled.*

Load BIOS Default

When you access "Load BIOS Default", the following message appears:

```
Load BIOS Default (Y/N) ?N
```

The BIOS Default values are the "worst case" default, and are the most stable values for the system.   Use them if the system is performing erratically due to hardware problems.   To load the BIOS Default values, press <Y> then <Enter>.

Load Setup Default

When you access "Load Setup Default", you are shown the following message:

```
Load Setup Default (Y/N) ?N
```

The Setup Default values represent the "best case" defaults, and should provided optimum system performance.   To load the Setup Default values, press <Y> then <Enter>.

Supervisor / User Password Setting

When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

```
ENTER PASSWORD
```

Type the password, up to eight characters, and press <Enter>.   The password typed now will clear any previously entered password from CMOS memory.   You will be asked to confirm the password.   Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.

If you select System at Security Option of BIOS Features Setup Menu, you will be prompted for the password every time the system is rebooted or anytime you try to enter Setup.   If you select Setup at Security Option of

BIOS Features Setup Menu, you will be prompted only when you try to enter Setup.

IDE HDD Auto Detection

This feature allows you to check all the information on your hard disk formation.   When you access "IDE HDD Auto Detection", the system executes auto detection.

At the prompt, it represents all the information on your HDD, and you are asked:

Do you accept this drive C: (Y/N) ?

1   If you accept the test result, press [Y] then [Enter] and the result is saved, then the system continues to detect another HDD.

2   If not, press [N] then [enter] and the system continues to detect another HDD.

Winbond W83781D Setup Guide

The w83781D supports 3 Temperature Resister   Sensors , voltage detection, and fan speed sensor control.

1. **3 Temperature Resister Sensors:**
    a. RT2: This function is the CPU's temperature sensor.
    b. RT1/RT3: These functions are the temperature sensor for the surrounded PC environment.
    c. You can connect the temperature resister wire to the RT2 socket in order to sensor   the CPU's temperature, when you have placed the temperature resister wire , tape the wire on top of the CPU heat sink.
    d. You can connect the temperature resister wire to the RT1 socket in order to control the system fan (JP9),when over temperature 60 degree (default),the fan will turn on.
    e. If you put the resister on top of RT1,RT2,RT3, you will be able to read the temperature on W83781D AP.

2. **Fan speed sensor control:**
    a. JP2 is the CPU's Fan speed sensor control.
    b. JP9 is the system Fan.
    c. JP2 and JP9 is an optional function.

3. **Voltage detection:**
    You can see the Voltage detection on W83781D AP.
